MANDATE REVIEW

Small Cap Canadian Equities

Recent Market Environment

Investing in Quality

1. Current market environment – uncertainty = Risk-Off

1. Large cap leadership
2. Narrow markets – Gold
3. Large cap valuations ex tech are reasonable, Small Caps are cheap
4. Cyclical-led markets are not unprecedented

2. Quality Value investing limits exposure to highly economically sensitive cyclical companies

1. ie Gold => unpredictable and volatile gold prices influenced by a variety of levers (inflation, central banks, retail momentum trade, fear trade) make bottom-up valuation challenging & can be at odds with long-term investing & a 3-5 year holding period
2. Consumer deep cyclicals – discretionary spending – ie car parts, manufacturers
3. Industrial deep cyclicals – ie aerospace

3. 2023 & 2024 were challenging years vs. the market

1. 2023 – cyclical led market, growth technology stocks ran
2. 2024 – all that glittered was gold – gold rally added 6% to the index return!

4. Why do we bias away from deep cyclicals?

1. Allows for greater confidence in long-term DCF models & longer holding periods to allow company strategies to play out – less guess-work & valuation matters
2. Delivers very low risk portfolios (std. dev., beta, risk-adjusted returns) with supporting dividend yield

Summary

Current Small Cap Opportunity

Catalysts:

1. Small Cap valuations are low vs. large cap – company fundamentals remain good (earnings, balance sheets)
2. A pullback in Gold prices will have a significant positive impact on relative performance
 1. Global uncertainty, wars led central banks to increase gold reserves
 2. Retail momentum buying ensued
 3. Peace agreements can serve to lessen the demand for gold & unwind the momentum trade
3. Risk-Off trading on tariff-risks began in Nov. following the U.S. Election
 1. Smaller cap companies have already pulled back considerably further than large caps
 2. Any moderation in the extent and/or duration of how the tariff threat plays out will close the small-large cap valuation gap
4. Rate moderation will benefit small caps (greater use of floating rate debt, M&A activity, dividend payers)
5. Lower global GDP growth + stagflation risk – this benefits small caps that are more capable of growing at much higher than GDP rates
