Junior Gold Miners: Underperforming/Volatile & Poor Commodity Tracking

Cumulative Returns ~ 17 Years to Mar. 31, 2026

Why do we bias away from deep cyclicals?

1. Allows for greater confidence in long-term DCF models & longer holding periods to allow company strategies to play out – less guess-work & valuation matters
2. Delivers very low risk portfolios (std. dev., beta, risk-adjusted returns) with supporting dividend yield

Summary

Current Small Cap Opportunity

Catalysts:

1. Small Cap valuations are low vs. large cap – company fundamentals remain good (earnings, balance sheets)
2. A pullback in Gold prices will have a significant positive impact on relative performance
 1. Global uncertainty, wars led central banks to increase gold reserves
 2. Retail momentum buying ensued
 3. Peace agreements can serve to lessen the demand for gold & unwind the momentum trade
3. Rate moderation will benefit small caps (greater use of floating rate debt, M&A activity, dividend payers)
4. Lower global GDP growth + stagflation risk – this benefits small caps that are more capable of growing at much higher than GDP rates

Turkey Considers Tapping \$135 Billion Gold Reserve for Lira Defense

- The bank has held discussions about conducting gold-for-foreign currency swap transactions in the London market
- Turkey has been one of the world's most aggressive gold buyers over the past decade as the country's leadership sought to trim exposure to US dollar-denominated assets.
- Turkey is especially vulnerable to inflation shocks and balance-of-payment concerns should the war in Iran prolong because it needs to import almost all of its oil and gas.
- Officials are already struggling to rein in an inflation rate that last registered at 31.5% in February, one of the highest in the world.
